SCIENTISTS COMPLETE WORK OF INVESTIGATING THE RELATIONS, ORIGIN AND RACIAL CHARACTERISTICS OF PRIMITIVE TRIBES AT WORLD'S FAIR

eclentists before the latter could make the desired examinations. INTERESTING FACTS. The work of examining the various strange peoples at the World's Fair for this purpose brought out many interest-

gation has brought out the information that the little Negritos from the Philippine Islands are inferior to the many types of peoples represented at the World's Fair. In fact, they are the lowest in the

human scale.

The physical development of the little fuzzy-halred Negritos, their characteristics and their mentality are recorded by the scientific "Sherlock Holmes" as being inferior to even the dusky pygmies from the jungles of Africa, whom popular science heretofore has credited as "the missing link."

ink."

In big, black, cold letters of type, the awful truth about the little Negritos, for a sight of whom the inquisitive public has for a summer past paid 25 cents will be told in the publication of the forthcoming relatities.

soon will.

Is this the penalty these little people will pay for having monkeys for pets, who pass for their own children?

When the truth dawns on them—well it will be crushing; but will crush them?

"The only hope for certain peoples," said Professor Bruner, in speaking of the investigations. "Is in their own extermination as a race. They can hope for nothing else.

else.

When a pyginy asks for 10 cents when he wants a banana, and asks for it no other time, there is hope for him. He lacks that preparation for the future called thrift, which is one of the most significant forces of divilization."

This same characterization "in laying up something for a rulny day" and their

up something for a rainy day" and their own future welfare is made of the Fili-pines. But the Filipinos are accredited with many other excellent qualities that quite offset this little discrepancy in character

of the Negrito women passed through the immigration office last spring on her arrival she carried, wrapped in a red shawd close in her arms, a little sarey-looking black-faced monkey.

The immigrant officer cast a giance at the Negrito family, then a giance at the Megrito family, then a giance at the monkey. He quickly decided that the small member of the siming name of the Negrito family, and a ferrward suffered part of the brain at this point had been removed, that the man had afterward suffered parity is of the Negrito tamily. The Negrito woman had no intention of smuggling a pet into the country. The immigrant officer to this day has not learned of his mistake. But the Negritos soon will.

Is this the penalty these little people will pay for having menkeys for pets, who pass for their own children?

When the truth dawns on them—well it will be compliant takes a look at his nose.

If the bridge of the nose is flat, he is

dian, the scientist takes a look at his nose.

If the bridge of the nose is flat, he is recorded instantly as a full-blood American Indian.

If his nose takes on a higher stage of development, and inclines in form and shape to the American nose, no matter what his color, he is put down as a half breed. This is a fact that never fails to convince and prove the racial identity of the subject.

ONLY THREES FILL, BLOODS ONLY THREE FULL BLOODS.

ONLY THREE FULL BLOODS.

Of the 350 Indian boys and girls who represented the Indian Government School work at the Exposition, it is said the records of the scientists, after the completion of their tests will show that only three were full-blooded Indians.

The most interesting comparison of the tribes as the result of the investigation, shows the similiarity between the American Indian and the Igurrotes from North Luxon.

Much praise is made in favor of the Igorrotes. In some instances they even outclass the whites. One of these is having a superior-shaped head.

Luzon.

It is the belief of the scientists that the Igorrotes and all the other Filipino tribes of the Island have been immigrants to the Philippines, at some time. The

done with them. Only the chin of one remained, and a part of the siles of the face of another.

"Another remarkable feature of the fire was the way the large painting of Pope Leo remained unharmed. This was upstairs in the southwest part of the building. It is framed with a deep gold frame of plush and ebony, covered with glass. When we put this picture in the building, it required seven men to hang it. We fastened it to the wall with four large screws and by chance they struck the joist.

"The ceiling, floor and walls, excepting the joist, were burned, yet this picture is not even scorched. The glass is not even smoked or cracked. The only damage it suffered was to the plush on the lower side of the frame. Water in some way got behind the glass and wet this plush. When we took this down we had to take it to pieces, and lower it with a rope and derrick.

"I asked the firemen how they accounted for this remarkable freak of the fire. They said that they played a heavy stream of water around the picture, but even then it is wonderful. The saving of all the paintings in the Missouri building is one of the greatest fire wonders of the generation, and is certainly something that the people of Missouri have to be thankful for, because as history, the paintings are invaluable."

In a short time the paintings, will be back in their old places on the walls of the Capitol at Jefferson City.
